

Sustainability Agenda

In addition to the drive for insuring new buildings are as green as possible, Cardiff Waterside are looking at the existing Estate to consider a number of initiatives whereby the tenants and the management team together can take a responsible approach to the environment. A number of initiatives underway include reviewing:

- Environmental quality (air quality and natural daylight)
- Energy and resultant CO2 emissions
- Transport
- Water use
- Waste management
- Procurement

Tenants are being asked to nominate green champions who can help work to an Estate-wide policy to address the above points; initiatives currently underway include Estate-wide green travel plans, recycling initiatives and responsible ethically beneficial procurement policies.

Arup, the sustainability consultants, have been appointed to review the impact of the Estate and produce ongoing assessments to monitor the effectiveness of our programme.
